

ADVANTAGES

- Lateral tool shelf with integrated power sockets
- Easy to access and empty dust drawers
- Low maintenance requirements
- Plug & play
- Backdraft and downdraft exhausts
- Supplied with duct connection
- Integrated LED lighting

Application

Camfil's grinding bench handles coarse particle and sparks as well as dust and fumes generated from manual grinding applications with power tools.

Installation Options

Workplace systems like the grinding bench can easily be connected to a central extraction system from where, depending on the type of emissions, the process exhaust air is routed to a dust collector to get cleaned or ducted to the atmosphere where permitted. Therefore the system can be configured with an integrated or separate extraction fan.

Comment

Camfil's workstations are built to last in industrial environments. Made of heavy duty, welded steel with powder coated surfaces, the systems are easy to install and require low maintenance over the lifetime.
